PROFESSIONAL SUMMARY

Full-stack developer and Computer Science student at FAST NUCES, building and deploying web applications using React, FastAPI, Node.js, PostgreSQL, and MongoDB. Experienced in REST API development, JWT authentication, role-based access control, database design, and cloud deployment across Render and Vercel. Additional exposure to AI/ML through a Python-based Network Intrusion Detection System achieving 95.75% accuracy.

EDUCATION

FAST National University of Computer & Emerging Sciences — FAST NUCES 2024 – Present

Bachelor of Science in Computer Science | 3rd Year Student

- Relevant Coursework: Artificial Intelligence, Probability & Statistics, Database Systems, Software Design & Analysis, Operating Systems, Data Structures, Discrete Structures

TECHNICAL SKILLS

Languages: JavaScript, Python, Java, C++, SQL

Frontend: React, HTML5, CSS3, Vite

Backend: Node.js, Express.js, FastAPI

Databases: PostgreSQL, MongoDB Atlas, Firebase Realtime Database

Tools & Deployment: Git, GitHub, Linux, Render, Vercel, Netlify, GitHub Pages

Concepts: REST APIs, JWT Authentication, Role-Based Access Control (RBAC), Object-Oriented Programming (OOP), UML, Database Design, Normalization, CRUD Operations, API Design, Client-Server Architecture, SDLC, Requirements Analysis, Software Design Principles, Version Control, Input Validation, Error Handling

AI/ML: Scikit-Learn, KNN, Logistic Regression, Naive Bayes, K-Means Clustering, Genetic Algorithms, Data Analysis

EXPERIENCE

Freelance Full Stack Developer — amdigitaltech 2024 – Present

- Build full-stack web applications using React, backend APIs, databases, authentication, and deployment workflows.
- Work with React, FastAPI, Node.js, PostgreSQL, MongoDB, REST APIs, Git, GitHub, and cloud deployment platforms.
- Manage project structure, source control, deployment setup, and iterative improvements for client-focused applications.

Co-Lead — Google Developer Groups on Campus, FAST NUCES 2024 – Present

- Co-lead of a Google-affiliated developer community focused on student learning, technical growth, and developer outreach.
- Organized workshops, coding sessions, and developer events for students interested in software development and technology.
- Coordinated campus-level developer activities and supported community engagement through technical event planning.

Marketing Manager Intern — The ViewFinder Digital Jan 2024 – Jun 2024

- Managed client accounts, coordinated social media campaign activities, and tracked performance for digital marketing clients.
- Built communication, planning, and execution skills transferable to software project collaboration and delivery.

PROJECTS

SafeCity PK — Full-Stack Crime Intelligence Platform | React, FastAPI, PostgreSQL, JWT, RBAC, Leaflet, Render, Vercel

GitHub: github.com/abdullah-mangrio/safecity-pk Live Demo: safecity-pk.vercel.app/

- Built a crime intelligence platform with citizen incident reporting, admin verification workflows, analytics, and an interactive crime map.
- Developed RESTful APIs using FastAPI with JWT authentication and role-based access control for secure user access.
- Designed PostgreSQL-backed workflows for incident data, verification status, analytics queries, and audit logging.
- Integrated Leaflet mapping and deployed the backend/frontend through Render and Vercel workflows.

PakUniInfo — University Discovery Platform | React, Node.js, Express.js, MongoDB Atlas

GitHub: github.com/abdullah-mangrio/PakUniInfo Live Demo: pak-uni-info.vercel.app/

- Developed a university discovery platform helping students explore Pakistani universities through searchable and filterable data.
- Implemented filters for province, city, program, and university information to improve discovery and navigation.
- Built Node.js/Express APIs with MongoDB Atlas and an admin system with CRUD operations and JWT authentication.
- Deployed the full project with frontend and backend integration for public portfolio access.

Network Intrusion Detection System — Machine Learning Project | Python, Scikit-Learn, Pandas, Machine Learning

- Built an AI-powered Network Intrusion Detection System using 6,000 network traffic records.
- Implemented KNN, Logistic Regression, Naive Bayes, K-Means Clustering, and Genetic Algorithm-based feature selection.
- Achieved 95.75% accuracy using KNN after preprocessing, feature analysis, model evaluation, and optimization.
- Performed data preprocessing, visualization, classification, clustering, evaluation, and performance comparison.

IT Equipment Complaint Management System | Java, Java Swing, OOP

GitHub: github.com/abdullah-mangrio/ITComplaintSystem

Release: github.com/abdullah-mangrio/ITComplaintSystem/releases/tag/v1.0

- Designed and implemented a Java Swing desktop complaint management system for university IT equipment complaints.
- Built role-based dashboards and complaint workflows from Software Requirements Specification and UML designs.
- Applied Object-Oriented Programming concepts including inheritance, abstraction, and structured application design.

Playlist Tracker — Client Web Project | JavaScript, Firebase Realtime Database, GitHub Pages

GitHub: github.com/abdullah-mangrio/playlist-tracker

- Built a client project for multi-user playlist tracking with real-time catalog management and live synchronization.
- Integrated Firebase Realtime Database and deployed the project using GitHub Pages for client access.

CERTIFICATIONS

Generative AI Mastermind — Outskill 2026

- Completed training focused on practical usage of modern Generative AI tools, AI-assisted research, productivity workflows, and AI-assisted software development.
